SUMMARY

I am a Software Developer specializing in Agentic AI Solutions, Custom Model Context Protocol (MCP) Integrations, and Enterprise Google Workspace Automation. Currently driving AI enablement, custom integrations, and agentic solutions for clients across industries.

EXPERIENCE

The Wursta Corporation - Software Developer

April 2024 - Present

- Served as Lead Developer on a massive enterprise migration project for a leading electric vehicle (EV) manufacturer, re-platforming a complex ecosystem of legacy Microsoft applications (Power Apps, Power Automate, Power Pages) into robust Google Workspace integrations and modernized cloud applications.
- Created an internal generative AI workflow leveraging AI agents and the Gemini Enterprise API to automatically construct, compile, and format customized Statements of Work (SOWs), drastically reducing manual drafting time for complex and unique product offerings.
- Acted as a technical leader by publishing corporate engineering blogs, creating internal developer content libraries, and designing comprehensive client-facing training materials and technical workshops.

The Wursta Corporation - Jr. Workspace Integrations Developer

April 2023 - April 2024

- Sole developer of Wursta's first public Google Workspace Store add-on, managing its design, engineering, and compliance from end to end, including deployment, Stripe payment integration, and premium feature gating.
- Partnered with clients across a wide range of industries to design and build custom Google Apps Script automations and AppSheet applications, rapidly developing functional prototypes and production tools to streamline business workflows.

FedEx Ground - Data Analyst

May 2022 - April 2023

- Analyzed complex service data using Power BI dashboards, Excel pivot tables, and data visualizations to communicate key performance trends to leadership, successfully driving decisions that improved service outcomes.
- Coordinated day-to-day logistics operations between FedEx Ground and third-party delivery vendors, serving as a primary point of contact to communicate performance metrics and align on operational improvements.

FedEx Ground - Sort Manager

October 2021 - May 2022

- Led and mentored a team of 20+ operations managers and over 400 package handlers, keeping separate operational areas working in parallel toward strict daily throughput goals.
- Managed the processing of 80,000+ packages daily, making real-time, high-pressure decisions to resolve sorting bottlenecks and handle high operational variability.

FedEx Ground - Area Manager

January 2021 - October 2021

- Supervised, trained, and engaged a high-performing team of operations managers on safety standards and workflow optimization.
- Boosted weekend processing throughput efficiency by approximately 10% by re-engineering sorting routes into compact load areas.

FedEx Ground - Operations Manager

December 2018 - January 2021

- Led frontline teams of package handlers through multiple high-intensity sorting phases, ensuring compliance with strict sorting lanes.
- Managed employee time cards, handled onboarding and training, and delivered formal operational performance reviews.

SKILLS

AI Engineering:	Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Agentic Workflows, Gemini & Vertex AI APIs, Frontier Models (OpenAI, Anthropic, Google), Ollama & Open-Source LLMs (Qwen, Gemma), Enterprise LLM Safety, Structured Data Extraction, Prompt Engineering, AntigraVity
Languages & Frameworks:	Python, TypeScript, JavaScript, SQL, HTML5, CSS3, VBA / VBScript
Cloud & Infrastructure:	Google Cloud Platform, Docker, Node.js, Express.js, REST APIs & Webhooks, PostgreSQL, MongoDB, CI/CD, GitHub Actions
Enterprise Automation:	Google Apps Script, Google AppSheet, Microsoft Power Platform, Google Workspace APIs, Advanced Excel & Google Sheets, Data Migrations

EDUCATION

Butler University - Accelerated Software Engineering Program

May 2022 - November 2022

Comprehensive post-graduate software engineering curriculum covering modern JavaScript/TypeScript ecosystems, MVC architectures, responsive React interfaces, Node.js backend systems, database engines, and CI/CD pipelines.

Ball State University - B.S. Coursework (Criminal Justice & Digital Forensics)

August 2014 - May 2018

Focused study in security protocols, legal criminology theory, and computer systems digital forensics, providing a highly analytical and cybersecurity-focused foundation for software engineering.
